Lab 01 - PHP Languge Fundamentals & Basic Form Handling

Section	Task	Comments	Marks	Out Of
Best Practices				
	All PHP variables have easily understandable and semantic names that follow the language's stylistic conventions.			1
	There are no errors generated when the page is loaded or, later, when the user begins interacting with the application.			2
	The final website is responsive and renders properly on mobile devices as well as larger screens.			1
	The HTML is written semantically; markup uses the most appropriate elements for the content.			1
	The user is greeted with a message that clearly explains the purpose of the program and how to use it.			1
Functionality				
	The user is presented with a form that prompts them to enter the number of assignments they've completed.			2
	When the user submits this form, they are taken to a second form.			1
	The second form has the amount of fields that the user previously indicated (on the first form) that they needed.			2
	The user is given an optional field to indicate what they would like their final mark to be.			1
	If there are any errors, the form fields retain their values.			2
Calculations				
	The overall average is calculated correctly.			1
	If the desired grade is provided, the amount the student must get on their remaining assignments is calculated correctly.			1
	All calculations are presented to the user in a way that they can easily understand.			1
